CARFUSION DYE AND ANTI-SPILL HOLDER

Carfusion Dye/Castellanis Paint is a long lasting skin marking dye. It dissolves skin oils and penetrates into the pores and will resist mild washings. To apply use Item 464-080, Pointed Wood Stick Applicators. On rare occasion, a patient's skin could react to this chemical, forming small water blisters where the dye was applied.

Easy removal of Castellanis Paint is accomplished by using Erado-Sol Stain Remover (Item 466-000 or 466-100).

To reduce the risk of spills, the dye can be used with the Item 463-000, Carfusion Dye Holder. The Carfusion Dye Holder is an aluminum container which stands 4" (10 cm) high and has a 3 1/2" (9 cm) square base with four rubber feet. The screw-on cap with seal has a 2" (5 cm) stainless steel tube that goes down into the container. Therefore, if the holder is knocked to the floor, due to the vacuum seal and tube design, only a few drops will spill and the holder will not break.

STERITATT® TATTOO CARTRIDGE

- · Sterile, Non-toxic, Low-allergy Ink
- · Neat and Easy to Use
- Supports Precision of Treatment
- Single-use for Patient Safety
- · Standardizes the Tattooing Method

SteriTatt® is a single-use device that contains sterile, non-toxic, permanent ink. Each SteriTatt® device contains low-allergy ink that is safety-sealed and gamma irradiated to guarantee sterility for the highest quality of patient care.

SteriTatt's® pen-like design offers ease and comfort of use and helps standarize the methods therapists employ to administer tattoo markings. The ink flow is easily regulated so too much ink will not be dispersed.

SteriTatt® can be used two different ways: it can be applied to a prepared site using the "dropping method", or a hypodermic needle can be attached to the SteriTatt® unit so the ink can be injected under the patient's skin.

ADHESIVE REMOVER WIPES

This Adhesive Remover Wipe dissolves and removes adhesive residue from skin and surfaces. It will also easily remove the marks from a Decocolor Paint Marker. This wipe does leave a slightly oily residue so if re-marking it is recommended to clean the residue with alcohol before re-marking. The wipe has a fresh scent, is latex-free, nonirritating and is 1.25" x 3" (3.2 x 7.6 cm) in size.

Indicator® Radiopaque Markers can be used in a variety of imaging procedures to identify any point of interest, including: Masses, Scar tissue, Moles, Isocenter, Points of Pain

The markers provide a clear, accurate reference point that is free of spray artifacts. The flat design prevents tissue indentation and the clear adhesive backing aids in precise marker placement. In addition to enhancing accuracy, they promote procedural efficiency with double pulls tabs that permit easy application and removal.

X-LINE™ PRECISION RADIOTHERAPY TAPE FOR CT SIMULATION

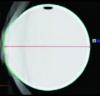

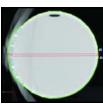

Clear scan within sFOV

Distorted image in 65cm eFOV

X-Line™ connect-the-dots body contour

Siemens HDFOV PRO Phantom

A Solution to CT Simulation Image Distortion in Obese Patients

- More Accurate
- · Fast and Simple
- Low-Cost
- Optimal Dosage
- Latex Free

X-Line™ allows accurate contouring within distorted regions of the CT image, improving radiotherapy outcomes.

Obese patients must be imaged with the extended field of view (eFOV), often resulting in distorted body contours. X-Line™ provides a series of reliable dots within the distorted sections of the eFOV, allowing for easy identification of the true body contour. The radiopaque lines on X-Line™ show up as hyperdense in CT simulation. Connect underneath the dots to get an accurate body contour - it's that easy!

Body contour distortion from large patients in the eFOV

- GE Discovery CT590 RT, Optima CT580 RT and LightSpeed RT have a scan FOV (sFOV) of 50cm and a 65cm extended FOV (eFOV) option
- Siemens Somotom models have a 50cm sFOV and eFOV up to 80cm
- Body regions within the eFOV is distorted and contains artifact, resulting in an inaccurate body contour
- Body contour inaccuracies can lead to incorrect SSD and dosage calculations

X-Line™ General Instructions

- Apply X-Line[™] to all body regions that might fall outside of the scan field of view
- Tear a strip length that fully encompasses the region of interest
- Expect to use 3-5 strips per patient, depending on their size

Step 1 - Peel

- · Peel away the protective backing
- X-Line™ is kiss cut to make for easier removal

Step 2 - Apply

- Apply X-Line[™] to the region of interest
- Orient the radiopaque lines perpendicular to the direction of the CT cross section
- Space the X-line[™] strips approximately 1 inch apart
- Only apply each X-Line[™] strip once

Step 3 - Scan

- Then, perform the CT scan as usual
- Remove and discard the X-Line[™] strips after the scan

Step 4 - Connect

- Finally, connect just underneath the bright, hyperdense dots in the resulting CT images
- Connecting underneath the dots avoids including these hyperdense regions in the radiation dose planning

MULTI-MODALITY MARKERS

- · No tissue indentation
- · No artifacts
- Clear, accurate reference point identification
- Visible in all modalities
- Does not melt or leak
- Size and shape are ideal for small area
- Disposable

The Multi-Modality Markers provide a clear and accurate reference point on any type of scan. Made of a hydrogel component with a medical grade adhesive, they appear as a bright object on CT, MRI, nuclear medicine, PET and x-Ray scans and can be seen on all MRI sequences. These versatile markers attach securely and detach easily. Our Radiology/Radiation Therapy Marker has an inner center hole that permits hypodermic needle passage, while our Nuclear Med/PET Marker has a wellused for injecting a radionuclide with a conventional hypodermic needle.

Item 462-029 Multi-Modality Markers, Radiation/Radiology have a 2 mm inner center hole for hypodermic needle passage.

HIGH DENSITY RECTAL MARKER

Rectal - Vaginal - External

Shown with Latex Cover

The Rectal Marker is a flexible tube packed with lead balls spaced at 1 cm intervals from center to center. The CT Rectal Marker has teflon balls with same spacing. The Rectal Marker is used to accurately obtain both the rectum position and magnification by counting the balls. This determines the rectum location relative to the radiation field. An adjustable anus marker can be utilized during simulation or port filming. The Rectal Marker can be used in the vagina or as an external marker.

VAGINAL DEPTH SCALES

707-145

The vaginal depth scale can be used during simulation or for a port film. Position and magnification can be determined by counting the lead balls which are spaced 1 cm apart and are 5 mm in diameter.

The vaginal depth scales up to 3.2 cm diameter can be used with the standard holder (Item 707-020). The special vaginal depth scale holder (Item 707-030) is needed for the 3.8 cm diameter vaginal depth scale but will also accommodate all vaginal depth scales.

The CT Vaginal Depth Scale (Item 707-145) is 1.6 cm in diameter and 26 cm long and has teflon balls instead of the lead balls.

An introitus marker is included with the 1.6 cm diameter vaginal scale (Item 707-000) or can be purchased separately. Introitus markers for all other vaginal depth scales are sold separately.

A thumb screw holds the introitus marker in position.

FLEXIMARC™ GOLD FIDUCIAL MARKERS

- · Uses node technology for better visibility
- · Specifically shaped to prevent migration
- · Available in 2 or 3 node configurations
- · One marker provides 2 distinct reference points
- · Visible in TRUS, BAT, Portal, MRI, CT and x-Ray
- Multiple diameters and needle gauges to meet your needs
 0.9 MM diameter with 18 GA needle
 1.2 MM diameter with 17 GA needle

FlexiMarc™ fiducial marker is the first of its kind, this implantable marker produces a unique non-boiological node based projection. The FlexiMarc™ combines 99.99% pure, biocompatible, gold connectors and 3 mm long gold nodes. Unlike regular linear or coiled markers, FlexiMarc™ has nodes that inhibit migration and are easily recognized by the human eye and IGRT software.

The unique patent pending shape allows soft tissue to anchor the marker in place thus greatly reducing the probability of marker migration.

Items 456-100 and 456-110 with 0.9mm diameter have a spacing of 10 mm and are in a 18GA, 20 cm long needle

Items 456-120 and 456-130 with a 1.2 mm diameter have a spacing of 10 mm and are in a 17GA, 20 cm long needle.

The FlexiMarc™ Fiducial Markers are preloaded in the needles and sterile.
