Description

The 0.125 cm³ ionization chamber type 31002 is designed for measurements in the useful beam of high energy photon or electron fields. The chamber is watertight and used mainly for relative measurements with a water phantom or air scanner for characterization of the radiation fields of therapy accelerators and teletherapy cobalt sources. The measuring volume is open to the surrounding air via cable and connector. The measuring volume is approximately spherical resulting in a flat angular response over an angle of 160° and a uniform spatial resolution during phantom measurements along all three axis. The chamber has a short rigid stem for mounting and a flexible connection cable.
